Fatent No. US20020174446A1

GENERAL INFORMATION:

APPLICANT: Cohen, Dalia et al.

TITLE OF INVENTION: Identification of Genes Involved in

TITLE DE INVENTION: Alzheimer's Disease Using Drosophila Melanogaster:

TILE DE INVENTION NUMBER: 00/1-09-27

PRIOR PILING DATE: 2000-09-29

PRIOR PILING DATE: 2000-09-29

PRIOR FILING DATE: 2001-06-14

NUMBER OF SEQ ID NOS: 53

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14 MSPPPLLQPLILLLPLLNVEPSGATLIRIPLHRVQPGRRILNLLRGWREPAELPKLGAPS

                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2, Al

SEQUENCE CHARACTERISTICS:
LENGTH: 395 amino acids
TYPE: amino acid
STRANDEDNESS: single
TOPOLOGY: linear
                                                                                                                                                                                                                                   TOPOLOGY: linear
MOLECULE TYPE: peptide
HYPOTHETICAL: NO
ANTI-SENSE: NO
FRAGMENT TYPE: N-terminal

Patent No. 6225103
GENERAL INFORMATION:
APPLICANT: Keolsch, Gerald
APPLICANT: Lin, Xinli
APPLICANT: Tang, Jordan
TITLE OF INVENTION: Cloning and Characterization of Napsin
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:

                                                                                                                                                                                                                                                                                                                 from the consensus sequence (see AAX81152) of overlapping cDNA clones obtained from various libraries. Northern analysis shows expression of HUPM-4 in cardiovascular, haematopoietic, and male and female reproductive cDNA libraries. Approximately 56% of these libraries are associated with neoplastic disorders, 18% with inflammation and the immune response, i.e. HUPM-1 to -12 (see AAX80432-43), and the polymortection provides 12 new human proteases, i.e. HUPM-1 to -12 (see AAX80432-43), and the polymortectides encoding them (see AAX87149-60). Also provided are vectors, host cells and methods for producing HUPM polypoptides, as well as agonists and antagonists of HUPM. Methods for preventing cell providerative disorders and immune disorders using HUPM or HUPM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

                                                                                The present sequence is human aspartic protease-1 (NHAP-1) encoded by cDNA obtained from human lung cDNA library. NHAP-1 gene is located on chromosome 19q13. NHAP has immunosuppressive, antialraptic, cytostatic, antiatesthmatic, antiinflammatory, antiatreriosclerotic, antithyroid, antibacterial, neuroprotective, antidiabetic, anti-HIV, osteopathic and antiatrhritic activity. It is useful for treating and preventing endocrinological disorders like hypogonadism, Sheehan syndrome, diabetes insipidus, cretinism and hypothyroidism, cancers like adenocarcinoma and leukaemia, immunological disorders like acquired immune deficiency atherosclerosis addison's disease, amyloidosis, arthritis, osteoporosis, atherosclerosis and microbial infections and respiratory disorders like allergy, asthma and emphysema. NHAP pollynucleotides can be used in gene therapy and for diagnosis of disorders associated with expression of NHAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300

                                                                                                                                                                                                                   The present sequence is a lung specific gene (LSG) protein Lng105 from human clone ID 3107312. The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples obtained from patient and normal control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     241 AHYIPPLIFVPVTVPAYWQIHMERVKVGPGLTLCAKGCAAILDTGTSLITGPTEEIRALH 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents the human napsin B protein, encoded by the cDNA sequence given in AAV27038. The N-terminus of this cDNA was obtained by splicing together isolated napsin cDNA clones, which had been found by screening a human liver cDNA library, whereas the C-terminus was obtained by using genomic clones. Napsin B is an aspartic protease which was isolated from human liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a transgenic fly whose genome comprises DNA encoding a polypeptide having the Abeta portion of human amyloid precursor protein (APP), fused to a signal sequence. The DNA sequence encodes a 123 (Abeta42) amino acid sequence, given in the specification. The DNA sequence is operably linked to a tissuespecific expression control sequence. Expression of the sequence gives the fly an altered phenotype. The purpose of the invention is for identifying agents that inhibit or promote the expression and/or function of genes or encoded polypeptides which modify the APP pathway. The agent is a compound, triple helix DNA, antisense oligonuclectide, double stranded RNA molecule, ribozyme, or particularly an antibody. It is used to treat conditions such as Alzheimer's disease. The agent can be used as an APP pathway modulator or in gene therapy. This sequence represents the protein of the APP related NAPI from the aspartyl protease-related family

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the amino acid sequence of the human cathepsin polypeptide-2 (HCP -2), which is involved in inflammation, metastasis and peptide/proenzyme processing. HCP related products (e.g. antibodies, agonists, and antagonists) are potentially useful for treating tumours, arthritis,

                                                                                                                                                                                                                                                                The present sequence represents a human aspartic protease. The present invention describes novel human aspartic proteases and also ESTs from human cDNA libraries having partial DNA sequences which encodes an aspartic protease. Compounds which inhibit aspartic protease, especially antibodies can be used in therapy where needed. The protease can also be used in therapy where needed. The protease can also be are the processing of endothelin and pro-opiomelanocortin prohomones. They may also be involved in the processing of serum amyloid A protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PGDKPASVPLSKFLDAQYFGEIGLGTPPQNFTVAFDTGSSNLWVPSRRCHFFSVPCWFHH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents the human napsin A protein. The cDNA sequence that produces this protein was obtained by splicing together isolated napsin cDNA clones, which had been found by screening a human liver cDNA library. Napsin A is an aspartic protease which was isolated from human liver, however it has also been found to be present in other
                                                                                                                                                                                                                                                                                                                         New isolated aspartic protease, napsin, from human liver - potentially useful for, e.g. diagnosis and treatment of disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MSPPPLILPLILPLILPLINVEPAGATLIRIPLROVHPGRRTINLLRGWGKPAELPKIGAPS

The present sequence is human aspartic protease-2 (NHAP-2) encoded by CDNA obtained from human leucocyte cDNA library. NHAP-2 gene is located on chromosome 19413. NHAP has immunosuppressive, antiallergic, or chromosome 19413. NHAP has immunosuppressive, antiallergic, cytostatic, antiatrathriftammatory, antiatrateriosclerotic, antithyroid, antibacterial, neuroprotective, antidiabetic, anti-HIV, csteopathic and antiarthrifta cactivity. It is useful for treating and preventing endocrinological disorders like hypogonadism, Sheehan syndrome, diabetes insipidus, cretinism and hypothyroidism, cancers like adenocarcinona and leukaemia, immunojaical disorders like acquired immune deficiency syndrome (AlDS), Addison's disease, amyloidosis, arthritis, osteoporosis, atherosclerosis and microbial infections and respiratory disorders like allergy, asthma and emphysema. NHAP polynucleotides can be used in gene therapy and for diagnosis of disorders associated with expression of NHAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
